

Commercial Engineer

About Windlab

Windlab Limited is an international renewable energy development company that participates in wind generation projects from inception through development, financing, construction and the asset management of operating wind farms. Windlab's main operations are in Australia, however the company has offices in South Africa, Tanzania and the United States. Our Technical Services Division, based in Canberra, has also advised on projects in places such as Kazakhstan, Mexico and New Zealand.

Flagship projects that Windlab has developed include Kennedy Energy Park, Kiata and Coonooer Bridge in Australia and Amakhala Emoyeni in South Africa. Our strong pipeline consists of over 7,000MW across 6 countries and is expected to grow and mature in the near future.

Recent growth and advances in Windlab's pipeline has created the need for a Commercial Engineer, based within Windlab's technical services team.

The ideal candidate

- Windlab is seeking an experienced Commercial Engineer to lead a range of technical activities across Australia, sub-Saharan Africa and North America
- Demonstrated knowledge and experience in equipment supply evaluation, OEM trends and pricing, EPC and WOM options, finance requirements
- Ability to lead or support turbine supply negotiations
- Technical and commercial understanding of grid connection and project development processes
- Willingness to travel and support multiple projects across Windlab jurisdictions
- Self-motivated, highly organised individual with strong communications skills

Benefits

- An attractive remuneration structure and relocation package will be offered commensurate with role and experience
- Opportunity to be part of the growth story of an ASX listed business
- City location with Canberra lifestyle
